

## 1 Light Poverty

Students studying using Kerosene lamps.

Over 2 billion people are still burning unsafe kerosene to light up their evenings.

In India alone, 2.5 million people have met with a kerosene related fire accident, which includes 350,000 children.

Africa is even worse.

Montage picture of part of the Earth (showing Europe and Africa) taken by Astronaut Sunita Williams from the International Space Station.

**Come up with a solution to this problem.**

Try and think about every aspect of your solution  
– not just technical aspects. For example:

1. What is the energy source?
2. Who will produce your product / system?
3. Who is responsible for installing your product / system?
4. How will your solution be maintained?
5. How much will it cost?
6. Who will pay?
